Security made simple.

Sophos XG Firewall on Microsoft Azure

Security for the Azure cloud

Sophos XG Firewall is a "next-generation" firewall that you can select and launch from within the Microsoft Azure Marketplace. XG Firewall deploys as an all-in-one solution that combines advanced networking, protections such as Intrusion Prevention (IPS), and Web Application Firewalling (WAF), as well as user and application controls. XG Firewall is designed to help you protect your Azure-based workloads against advanced threats.

Highlights

‣ Quickly deploy into your environment from the Azure Marketplace

‣ Secure cloud-based applications and workloads using multiple technologies in an all-in-one solution

‣ Gain visibility into your network users and applications with an easy-to-use, web-based console

‣ Flexible pricing allows you to Pay-As-You-Go or Bring Your Own License

Easy to deploy
XG Firewall is available as a preconfigured virtual machine within the Azure Marketplace for seamless deployment into your Azure environment. You can use the provided Azure Resource Manager templates to deploy with a default configuration, or customize the deployment according to your specific security requirements.

All-in-one protection
Sophos XG Firewall provides you with multiple security technologies in a single solution. You can choose from Next-Gen firewall features to help protect your network, and web application firewalling (WAF) to help protect your web-based applications, as well as advanced protection for ensuring Remote Desktop users adhere to your policies. Deploying an all-in-one solution makes administration easier and reduces your overall cost of management. Simply choose what you want to deploy.

Policy management made simple
XG Firewall provides a unified policy model that allows you to manage, view, filter, and sort all your user, application and network policies from a single, easy-to-use, web-based console.

Out-of-the-box reports
XG Firewall provides out-of-the-box reporting to help you understand network and user activity within your environment. You can run detailed reports that are generated and stored locally, without using third-party tools. The Sophos User Threat Quotient report allows you to set baselines to help identify and alert you when your users' activities are out of compliance.

Flexible Pricing
Pay-As-You-Go pricing allows you to quickly deploy and use Sophos XG Firewall, and pay only for what you use. You can also purchase a license from a Sophos partner and Bring Your Own License (BYOL) to Microsoft Azure, while receiving all the support and price benefits provided by your chosen partner.

Security features you can't get anywhere else

As well as simplifying core security tasks, Sophos delivers innovative approaches to ensure you get even more protection.

Policy templates get you protected fast

Pre-defined policy templates let you protect common applications like Microsoft Exchange or SharePoint quickly. Simply select them from a list, provide some basic information and the template takes care of the rest. It sets all the inbound/outbound firewall rules and security settings for you automatically - displaying the final policy in a statement in plain English.

Patented Layer-8 Identity control

Sophos takes User identity enforcement to a whole new level with our patented Layer-8 identity based policy technology, enabling user level controls over applications and resources regardless of the virtual network or machines. It literally takes firewall policy to a whole new universe.

Flexible deployment, no compromise

Sophos XG Firewall comes with an Azure Resource Manager template where you can define and customize the exact parameters for your environment. Sophos XG Firewall can also be deployed on Microsoft Cloud for US Government and Microsoft Cloud Germany for compliance and isolation.

Automated user risk reports

The Sophos User Threat Quotient (UTQ) indicator is a unique feature to Sophos customers, providing actionable intelligence on user behavior. Our firewall correlates each user's surfing habits and activity with advanced threat triggers and history to identify users with risk-prone behavior.

Supported Virtual Machines

Sophos XG Firewall is available on a wide variety of virtual machine sizes.

Virtual Machine Type	Cores	RAM	Disk Sizes
A3	4	7GB	285GB
D3	4	14GB	200GB
G3	8	112GB	1,536GB
GS3	8	112GB	224GB

A simple approach to comprehensive support

We build products that are simple yet comprehensive. And, we take the same approach with our support. With options ranging from basic technical support to those including direct access to senior support engineers and customized delivery.

Licenses names	Standard Included with purchase	Enhanced Included in all bundles	Enhanced Plus
Support Via telephone and email	For 90 days (business hours only)	Included (24x7)	VIP Access (24x7)
Security Updates & Patches For the life of the product	Included with an active software subscription	Included with an active software subscription	Included with an active software subscription
Software Feature Updates & Upgrades	Included 90-days	Included	Included
Consulting Remote consultation on your firewall configuration and security with a Sophos Senior Technical Support Engineer			Included (up to 4 hours)
Technical Account Manager Dedicated named technical account manager		Optional (extra cost)	Optional (extra cost)
